Word count (abstract): [Enter abstract word count; maximum 250 words]

Figures / Tables: 1 figure; 1 table

Title of the Manuscript

Abstract

Manuscripts should include an abstract not exceeding 250 words, written to be understandable without reference to other sections of the paper. Abbreviations used only once should be spelled out in full. For abbreviations that appear multiple times, provide the definition once and use the abbreviation consistently thereafter. References, figures, tables, websites, equations, or other graphical elements should not be included in the abstract.

Keywords

keyword 1; keyword 2; keyword 3; keyword 4 [List at least three but no more than ten pertinent keywords.]

1. Introduction [first level heading]

State the objectives of the work and provide an adequate background to clarify why the study was undertaken and what hypotheses were tested, avoiding a detailed literature survey or a summary of the results. The information in this section should always be referenced. For your citations and reference list, please use the IMR Press-APA Style (Purdue University, 2022a) (Bagchi, 2021). Try to avoid footnotes and endnotes. [Abbreviations should initially be introduced in the abstract and the main text, detailing their full form before usage]

2. Materials and Methods

This section should be clear and sufficiently detailed. Clearly outline the procedures, including a comprehensive explanation of data collection, analysis methods, and statistical approaches used. Specify the sources of any datasets, software, or tools utilized (e.g., database names, software versions, or vendors). If established methodologies are used, cite relevant references instead of providing extensive descriptions. Ensure clarity and precision in the presentation of methods. [The suggested manuscript structure aims to standardize the presentation of submissions and facilitate reading and evaluation. However, we recognize that theoretical and conceptual articles may require adaptations. Therefore, while it is desirable to follow the proposed format, authors have the flexibility to adjust it according to the nature of their work. Nevertheless, the elements marked as mandatory must be included. The Editor-in-Chief will be responsible for ensuring that the manuscript structure aligns with the journal's standards.]

3. Results

Results can be presented in tables or figures, with a particular emphasis on figures to improve reader accessibility. However, many straightforward findings may be presented directly in the text. Results should be clearly separated from the discussion, and it is recommended to avoid repeating results in the text that are already presented in figures or tables.

3.1 Figures, Tables, Motions, and Equations, etc. [second level heading]

All figures and tables should be cited in the main text as Fig. 1, Table 1, Eqn. 1, Motion 1, etc.

3.1.1 Figures [third level heading]

Provide figure images in TIF or JPG format. Color images must be in RGB mode; CMYK is not accepted.

Copyright: © Year The Author(s). Published by IMR Press.
This is an open access article under the [CC BY 4.0 license](https://creativecommons.org/licenses/by/4.0/).

Publisher's Note: IMR Press stays neutral with regard to jurisdictional claims in published maps and institutional affiliations.

36 Minimum image resolutions are 800 dpi for line art, 600 dpi for combination artwork, and 300 dpi for halftone images.
37 Web-quality images at 72 dpi are not accepted. Figures should be placed in the main text near the first time they are
38 cited. Also, the legend should be detailed; it is not acceptable to give only one or two lines of description for figures.

39
40 **Fig. 1. Figure title.** (A) Description of what is contained in the first subfigure. (B) Description of what is contained in the second
41 subfigure. Abbreviations appearing in a figure should be listed here. Obtain permission and acknowledgement required by the copyright
42 holder if a figure is being reproduced from another source.

43 *3.1.2 Tables*

44 Tables should be placed in the main text near the first time they are cited.

45 **Table 1. This is a sample table caption.**

Title 1	Title 2	Title 3	Title 4
Entry 1	data	data	data
Entry 2	data	data	data
Entry 3	data	data	data
Entry 4	data	data	data

47 Table footnotes.

48 *3.1.3 Mathematical Components*

49 Example 1. Equation [fourth level heading]

50
$$a = 1 \tag{1}$$

51 The text following an equation need not start as a new paragraph. Please punctuate equations as regular text.

52 Example 2. Equation

53
$$a = b + c + d + e + x + y = X. \tag{2}$$

54 If the text following an equation starts as a new paragraph, equations should still be punctuated as regular text.

55 *3.2 Units*

- 56
 - A space should be inserted before measurement units: 17 mL, 17 mol/L, 17 cm.
 - Capitalize the letter L in some units: mL, L.
 - The letter p should be lowercase and in italic type: *p*, *p*-value.
 - Decimal points should use a full stop (.) NOT a comma (,): 0.17, 10.375.

60 **4. Discussion**

61 The discussion should be presented separately from the results and focus on interpreting the findings rather than
62 restating them. Avoid excessive speculation and ensure that relevant literature is cited to support the interpretation.
63 Toward the end of the discussion, briefly address the strengths and weaknesses of the research.

64 **5. Conclusions**

65 The main conclusions of the study may be presented in a short Conclusions section, which may stand alone or
66 form a subsection of a Discussion or Results and Discussion section. However, if the article type is Original Research,

67 there must be a Conclusions section, which should be distinguished from the Discussion section.

68 **Abbreviations [optional section]**

69 ANOVA, analysis of variance; SEM, structural equation modeling; GDP, gross domestic product; HLM, hierar-
70 chical linear modeling.

71 **Supplementary Material [optional section]**

72 Authors of accepted manuscripts may provide related supplemental data to be posted online along with the pub-
73 lished manuscript. Any file format is acceptable; however, we recommend that common, non-proprietary formats be
74 used where possible. Before submission, carefully review all files; if you wish to make changes to supplementary
75 material during any stage of the process, please make sure to provide an updated file. The journal is not responsible
76 for any errors contained in data supplements.

77 **Appendix [optional section]**

78 All appendix materials must be cited in the main text.

79 **Availability of Data and Materials**

80 This section strongly encourages that all datasets on which the conclusions of a manuscript depend should be
81 available to readers, unless they are already provided as part of the submitted article. Authors who do not wish to share
82 their data must state this fact and also provide an explanation as to why the data are unavailable. More information
83 about [Availability of Data and Materials](#).

84 Example: All data reported in this paper will be shared by the corresponding author upon reasonable request.

85 **Author Contributions**

86 All authors must meet the 4 criteria for authorship as outlined in the [authorship](#). Those who contributed to the
87 work but do not meet the criteria for authorship can be mentioned in the Acknowledgments.

88 **Example:** Initials (Author A) and Initials (Author C) designed the research study. Initials (Author B) performed the
89 research. Initials (Author D) provided help and advice on ... Initials (Author A) analyzed the data. Initials (Author B,
90 C and D) wrote the manuscript. All authors contributed to editorial changes in the manuscript. All authors read and
91 approved the final manuscript.

92 **Acknowledgment**

93 This section is required for all papers. Here you can acknowledge any support given that is not covered by the
94 author contribution or funding sections. This may include administrative and technical support, or donations in kind
95 (e.g., materials used for experiments). Please do not thank the editors in this section, but you can send an email to
96 express thanks. More information about [Acknowledgment](#).

97 **Example:** We gratefully acknowledge the assistance and instruction from Professor XXX of the XXX Institute for
98 XXX and the XXX Investigators.

99 Funding

100 This section is required for all papers. Please add: “This research received no external funding.” or “This
101 research was funded by Name of Funder, grant number XXX.”

102 Conflicts of Interest

103 This section is required for all papers. If there are no interests to declare, please add: “The authors declare no
104 conflicts of interest.” More information about [Conflicts of Interest](#).

105 Declaration of AI and AI-assisted Technologies in the Writing Process

106 In accordance with [COPE’ s stated position](#) on AI tools, artificial intelligence chatbots, such as [ChatGPT](#) and
107 similar AI tools based on large language models (LLMs), cannot be listed as an author of a paper. If the author(s)
108 have used AI tools in drafting of the manuscript, production of images or graphical elements of the paper, or in the
109 collection and analysis of data, the authors must be transparent concerning the use of AI tools (Aljanabi et al., 2023).
110 Furthermore, the use of AI tools must be disclosed in this section. Authors are fully responsible for the content of
111 their manuscript, even those portions produced by an AI tool, and are thus liable for any breach of publication ethics.
112 Final decisions concerning whether the use of an AI tool is appropriate or permissible in a submitted manuscript lie
113 with the journals’ editors. Specifically, the Editor-in-Chief is responsible for decisions concerning regular journal
114 submissions, or an Editorial Board member may be appointed by the Editor-in-Chief to make such judgments in the
115 case of conflicts of interest or for other circumstances.

116 **Example:** During the preparation of this work, the authors used ChatGPT-3.5 in order to check spelling and grammar.
117 After using this tool, the authors reviewed and edited the content as needed and take full responsibility for the content
118 of the publication.

119 References and Notes

120 Please note that authors are responsible for the accuracy and completeness of their [references](#).
