First name Last name: 0000-0002-2452-xxxx

First name Last name: 0000-0002-2453-xxxx

Running title: Short running title (maximum 60 characters)

Word count (main text): [Enter main-text word count]

Word count (abstract): [Enter abstract word count; maximum 250 words]

Figures / Tables: 1 figure; 1 table

1 Title of the Manuscript

2 Abstract

3 Manuscripts should include an abstract not exceeding 250 words, written to be understandable without reference to
4 other sections of the paper. Abbreviations used only once should be spelled out in full. For abbreviations that appear
5 multiple times, provide the definition once and use the abbreviation consistently thereafter. References, figures, tables,
6 websites, equations, or other graphical elements should not be included in the abstract.

7 Keywords

8 keyword 1; keyword 2; keyword 3; keyword 4 [List at least three but no more than ten pertinent keywords.]

11 1. Introduction [first level heading]

12 State the objectives of the work and provide an adequate background to clarify why the study was undertaken
13 and what hypotheses were tested, avoiding a detailed literature survey or a summary of the results. The information
14 in this section should always be referenced. For your citations and reference list, please use the IMR Press-APA Style
15 (Purdue University, 2022a) (Bagchi, 2021). Try to avoid footnotes and endnotes. [Abbreviations should initially be
16 introduced in the abstract and the main text, detailing their full form before usage]

17 **Note:** Fictitious compilation examples only; not sources for manuscript claims. Author-count checks: one author (Adams, 2001); two
18 authors (Baker and Brown, 2002); three authors (Carter et al., 2003); four authors (Davis et al., 2004); six authors (Foster et al., 2006);
19 seven authors (Garcia et al., 2007); eight authors (Harris et al., 2008).

20 2. Materials and Methods

21 This section should be clear and sufficiently detailed. Clearly outline the procedures, including a comprehensive
22 explanation of data collection, analysis methods, and statistical approaches used. Specify the sources of any datasets,
23 software, or tools utilized (e.g., database names, software versions, or vendors). If established methodologies are used,
24 cite relevant references instead of providing extensive descriptions. Ensure clarity and precision in the presentation
25 of methods.

26 **Note:** The suggested manuscript structure aims to standardize the presentation of submissions and facilitate reading and evaluation.
27 However, we recognize that theoretical and conceptual articles may require adaptations. Therefore, while it is desirable to follow the
28 proposed format, authors have the flexibility to adjust it according to the nature of their work. Nevertheless, the elements marked as
29 mandatory must be included. The Editor-in-Chief will be responsible for ensuring that the manuscript structure aligns with the journal's
30 standards.

31 **Note:** Fictitious compilation examples only. Shuffled input, alphabetically sorted output: (Adams, 2001; Baker and Brown, 2002; Carter
32 et al., 2003; Davis et al., 2004). Name and reference-type checks: (de la Cruz, 2016; de la Cruz and van Beethoven, 2011; Dupont, 2012;
33 Example Research Group, 2000; García Márquez, 2013; Smith, 2010; 张三 and 李四, 2015). Remove both compilation notes and all
34 koexample-* entries before submission.

35 3. Results

36 Results can be presented in tables or figures, with a particular emphasis on figures to improve reader accessibility.
37 However, many straightforward findings may be presented directly in the text. Results should be clearly separated
38 from the discussion, and it is recommended to avoid repeating results in the text that are already presented in figures
39 or tables.

40 3.1 Figures, Tables, Motions, and Equations, etc. [second level heading]

41 All figures and tables should be cited in the main text as Fig. 1, Table 1, Eqn. (1), Motion 1, etc.

42 3.1.1 Figures [third level heading]

43 Provide figure images in TIF or JPG format. Color images must be in RGB mode; CMYK is not accepted.
44 Minimum image resolutions are 800 dpi for line art, 600 dpi for combination artwork, and 300 dpi for halftone images.
45 Web-quality images at 72 dpi are not accepted. Figures should be placed in the main text near the first time they are
46 cited. Also, the legend should be detailed; it is not acceptable to give only one or two lines of description for figures.

Fig. 1. Figure title. (A) Description of what is contained in the first subfigure. (B) Description of what is contained in the second subfigure. Abbreviations appearing in a figure should be listed here. Obtain permission and acknowledgement required by the copyright holder if a figure is being reproduced from another source.

47 3.1.2 Tables

48 Tables should be placed in the main text near the first time they are cited.

Table 1. This is a sample table caption.

Title 1	Title 2	Title 3	Title 4
Entry 1	data	data	data
Entry 2	data	data	data
Entry 3	data	data	data
Entry 4	data	data	data

Table footnotes.

49 3.1.3 Mathematical Components

50 Example 1. Equation [fourth level heading]

$$a = 1 \tag{1}$$

51 The text following an equation need not start as a new paragraph. Please punctuate equations as regular text.

52 Example 2. Equation

$$a = b + c + d + e + x + y = X. \tag{2}$$

53 If the text following an equation starts as a new paragraph, equations should still be punctuated as regular text.

54 3.2 Units

- 55 • A space should be inserted before measurement units: 17 mL, 17 mol/L, 17 cm.
- 56 • Capitalize the letter L in some units: mL, L.
- 57 • The letter p should be lowercase and in italic type: *p*, *p*-value.
- 58 • Decimal points should use a full stop (.) NOT a comma (,): 0.17, 10.375.

59 **4. Discussion**

60 The discussion should be presented separately from the results and focus on interpreting the findings rather than
61 restating them. Avoid excessive speculation and ensure that relevant literature is cited to support the interpretation.
62 Toward the end of the discussion, briefly address the strengths and weaknesses of the research.

63 **5. Conclusions**

64 The main conclusions of the study may be presented in a short Conclusions section, which may stand alone or
65 form a subsection of a Discussion or Results and Discussion section. However, if the article type is Original Research,
66 there must be a Conclusions section, which should be distinguished from the Discussion section.

67 **Abbreviations [optional section]**

68 ANOVA, analysis of variance; SEM, structural equation modeling; GDP, gross domestic product; HLM, hierar-
69 chical linear modeling.

70 **Supplementary Material [optional section]**

71 Authors of accepted manuscripts may provide related supplemental data to be posted online along with the pub-
72 lished manuscript. Any file format is acceptable; however, we recommend that common, non-proprietary formats be
73 used where possible. Before submission, carefully review all files; if you wish to make changes to supplementary
74 material during any stage of the process, please make sure to provide an updated file. The journal is not responsible
75 for any errors contained in data supplements.

76 **Appendix [optional section]**

77 All appendix materials must be cited in the main text.

78 **Availability of Data and Materials**

79 This section strongly encourages that all datasets on which the conclusions of a manuscript depend should be
80 available to readers, unless they are already provided as part of the submitted article. Authors who do not wish to share
81 their data must state this fact and also provide an explanation as to why the data are unavailable. More information
82 about [Availability of Data and Materials](#).

83 Example: All data reported in this paper will be shared by the corresponding author upon reasonable request.

84 **Author Contributions**

85 All authors must meet the 4 criteria for authorship as outlined in the [authorship](#). Those who contributed to the
86 work but do not meet the criteria for authorship can be mentioned in the Acknowledgments.

87 **Example:** Initials (Author A) and Initials (Author C) designed the research study. Initials (Author B) performed the
88 research. Initials (Author D) provided help and advice on ... Initials (Author A) analyzed the data. Initials (Author B,
89 C and D) wrote the manuscript. All authors contributed to editorial changes in the manuscript. All authors read and
90 approved the final manuscript.

91 Acknowledgment

92 This section is required for all papers. Here you can acknowledge any support given that is not covered by the
93 author contribution or funding sections. This may include administrative and technical support, or donations in kind
94 (e.g., materials used for experiments). Please do not thank the editors in this section, but you can send an email to
95 express thanks. More information about [Acknowledgment](#).

96 **Example:** We gratefully acknowledge the assistance and instruction from Professor XXX of the XXX Institute for
97 XXX and the XXX Investigators.

98 Funding

99 This section is required for all papers. Please add: “This research received no external funding.” or “This
100 research was funded by Name of Funder, grant number XXX.”

101 Conflicts of Interest

102 This section is required for all papers. If there are no interests to declare, please add: “The authors declare no
103 conflicts of interest.” More information about [Conflicts of Interest](#).

104 Declaration of AI and AI-assisted Technologies in the Writing Process

105 In accordance with [COPE’ s stated position](#) on AI tools, artificial intelligence chatbots, such as [ChatGPT](#) and
106 similar AI tools based on large language models (LLMs), cannot be listed as an author of a paper. If the author(s)
107 have used AI tools in drafting of the manuscript, production of images or graphical elements of the paper, or in the
108 collection and analysis of data, the authors must be transparent concerning the use of AI tools (Aljanabi et al., 2023).
109 Furthermore, the use of AI tools must be disclosed in this section. Authors are fully responsible for the content of
110 their manuscript, even those portions produced by an AI tool, and are thus liable for any breach of publication ethics.
111 Final decisions concerning whether the use of an AI tool is appropriate or permissible in a submitted manuscript lie
112 with the journals’ editors. Specifically, the Editor-in-Chief is responsible for decisions concerning regular journal
113 submissions, or an Editorial Board member may be appointed by the Editor-in-Chief to make such judgments in the
114 case of conflicts of interest or for other circumstances.

115 **Example:** During the preparation of this work, the authors used ChatGPT-3.5 in order to check spelling and grammar.
116 After using this tool, the authors reviewed and edited the content as needed and take full responsibility for the content
117 of the publication.

118 References and Notes

119 Please note that authors are responsible for the accuracy and completeness of their [references](#).
